Long Range Systems UK

Good communication is critical for maximum efficiency and productivity

SP6 Pager

The SP6 which is also known as a service or restaurant waiter pager is the most robust pager we make.

It has been designed to be used in really tough areas of work and can take much abuse. This unit can be programmed wirelessly very simply so its easy to change pager numbers if you ever need to, but unlike other systems that have complex hardware that can fail, the SP6 from LRS needs nothing more than a transmitter.

Better Guest Experience

When staff have pagers they can provide a better service to the customer. Improve wait times and enhance your customers experience.

Enhance Staff Productivity

Staff are able to focus their time completing their job instead of searching for other members of staff

Turn More Tables

Server pagers enable staff to serve food directly to the customer as soon as it is ready. The kitchen simply calls back the waiter.

Stay Connected

The SP6 Pager system allows staff in all industries to easily be recalled within seconds of sending that page.
