

## Zonal Connect Framework - 4.41.0

Release Date: 14 October 2022

Status: Released to Production

For detailed information on Zonal Connect Framework 4.41.0 please view a section below.

### Summary New Features

#### Pizza Hut - Uber Eats/Deliveroo Customer Record to be added to Customer Cache - ZCFNEW-110

This Feature enables ZCF to pass on Uber and Deliveroo references to KiQ via the Customer Cache, so that KiQ can pass on the relevant references to Dragontail

#### Reduced Log Bloat when checking for Stock or Theme changes for Push Changes - ZCFNEW-98

Checking for changes in Stock and Theme data for Push changes has caused log files to bloat. This feature resolves the issue of log bloat and reduces the log file size.

#### Increase JSON Deserialize Limits - ZCF Head Office - ZCFNEW-115

This feature increases the default 'out-of-the-box' JSON limits to a higher number so very large orders can be supported via ZCF Head Office.

### Bugs & Issues Resolved

There are no resolved issues/key information as of this release.

## Zonal Connect Framework - 4.40.0

Release Date: 21 June 2022

Status: Released to Production

For detailed information on Zonal Connect Framework 4.40.0 please view a section below.

ZCF has been upgraded from .NET Framework 4.5.2 and now targets .NET Framework 4.6.1. This changes the pre requisites for ZCF installs. Any machine that will have ZCF Head Office Proxy or ZCF Site Proxy installed on it must have a minimum of .NET Framework 4.6.1 installed/enabled.

## Summary New Features

### Update an Aztec account with a message line via ZCF - ZCFNEW-64

Added capability to display on Aztec, the status of an open account based of the order status in the kitchen, in a form of a message line.

### OLO - PortionId and DiscountId updated in configuration file - ZCFNEW-82

Added capability that allows an Online fee to be added and with this, OLO now require all orders, no matter of the external partner to have their products allocated the Online portion Id

### Mechanism to push Theme changes when detected - ZCFNEW-92

This feature contains ability to detect when changes have been made to the Theme at Aztec Site level, and these changes pushed to the customer webhook

### Mechanism to push Stock Level changes when detected - ZCFNEW-91

This feature contains ability to detect when changes have been made to the Stock at Aztec Site level, and these changes pushed to the customer webhook

## Logging to greylog for updates to Stock and Theme data - ZCFNEW-94

As part of the project to send Stock, Theme, Pricelist data to Mitchells and Butler, we need to ensure that any failed requests are logged to Greylog so that they can be investigated. Within the scope of this feature Zonal are implementing logging via to Greylog for each of Stock, Theme, Pricelist data.

## OLO Custom Identifiers - ZCFNEW-96

This feature introduced the capability to add support for OLO custom identifies to be able to report on orders received from NextBite properly.

## Add CollectionDateTime field to Stock / Theme sends - ZCFNEW-95

Added capability to Stock / Theme data updates to include a Date/Time stamp of when the data was collected.

### Bugs & Issues Resolved

There are no resolved issues/key information as of this release.

## Zonal Connect Framework - 4.39.1

Release Date: 18 March 2022

Status: Released to Production

For detailed information on Zonal Connect Framework 4.39.1 please view a section below.

## Zonal Connect Framework - 4.37.0

Release Date: 8 June 2021

Status: Released to Production

For detailed information on Zonal Connect Framework 4.37.0 please view a section below.

### Summary New Features

#### Include Hotel Divisions in account/Cost API - 427960

When an account/Cost is carried out with the parameter `creditMethodIdForHotelDivisionInfo={paymentMethodId}`, the basket response will now include hotel division information.

Aztec minimum version 3.20 required

#### Include Out of Stock Prices in account/Cost API - 421790

When an account/Cost is carried out with the parameter `?ignoreStockLimits=true`, the basket response will remain the same but an error response will not be returned if an item(s) are out of stock.

Aztec minimum version 3.20 required

#### Initiate Close Account via API and Update as Paid - Zonal ID 445155

There are scenarios where an account can remain open on the POS such as when an account has an outstanding balance or if it is a delayed order that has not been served. This feature provides the capability via API to close an account and pay off the outstanding balance and serve a delayed order account.

Aztec minimum version 3.20 required

## Support for Future Orders greater than 24 hours - Zonal ID 418319

Unattended mode configuration data from the theme is now available via ZCF by calling the config/{POSID} endpoint. This includes the two new additional fields MOATakeDepositPaymentMethodID and MOARedeemDepositPaymentMethodID

**Aztec minimum version 3.20 required**

## Support for Transfer of Ownership via API - Zonal ID 445031

This feature provides the capability via API to transfer ownership from one front of house user to another front of house user using the front of house pin as the unique identifier to initiate transfer of ownership along with the POS ID and account ID.

**Aztec minimum version 3.20 required**

## Zonal Connect Framework - 4.36.1

Release Date: 20 April 2021

## Zonal Connect Framework - 4.35.0

Release Date: 2 March 2021

Status: Released to Production

For detailed information on Zonal Connect Framework 4.35.0 please view a section below.

### Summary New Features

#### Improve Account / Cost API Error Handling - Zonal ID 394853

The Account/Cost API has a limitation where multiple errors may exist in the basket, but the response only contains details of the first error encountered. This means that the calling client may have to make multiple adjustments to the basket and multiple Account/Cost retries until all errors are resolved. The Account/Cost API has been changed so that if the calling client has opted-in and there are errors in the basket, a 500 internal server error including a list of errors will be returned.

#### Serialise Print Stream Information in Product Export Data - Zonal ID 419400

Relative print stream information is currently only serialized if either FollowParentCourse or RollUpPriceWhenChild (or both) are set to true in Aztec. Serialization rules have been changed to always serialise the relative print stream whether either FollowParentCourse or RollUpPriceWhenChild (or both) are set to true or false.

#### Display Aztec site name on the ZCF Site Proxy Status Page - Zonal ID 404131

There has been an enhancement to the ZCF status page to display both the site name and site GUID if they are available.

### Bugs & Issues Resolved

Zonal ID	Description
304425	ZCF Control Center - Head Office 'internal server error' received when editing a default MOA user, though the change is made in the ZCF Gateway Database
401421	HO Proxy status page fails to make call that fills in the status page
