

# Zonal Connect What's New

Version 1.06 | 10 June 2025

**Products**

## Sales Items

The following updates have been made to Sales Items in this release of Zonal Connect.

For more information view our individual help page topics.

### General Updates

---

#### Update

Sales Items in the side navigation has been moved to the top of all items as this is considered the most used product type, (previous to this change it was below choices)

When viewing the All Items or Sales Items list, an additional filter has been added to display only purchasable items. A new badge has been introduced to indicate which items are purchasable which is shown in the list table

To increase speed of reviewing dietary changes for nutrition a filter can be applied on the sales item list which displays all items awaiting review and enables the bulk review process

---

### Main Details

---

#### Update

The portion drop down shown on the main details page now displays the portions in the order they were added to an item, the standard portion will always remain the first portion shown

---

### Item Details

---

#### Update

When managing a sales item with either ingredients or choices already included the 'Add' button has now been removed, if additional ingredients or choices are needed selecting the Edit option will enable other items to be added

When the unit type 'factor' is used, it now correctly appears in ingredient lists, making it clear that a factor is being applied

---

## Dietary Info

---

Update

---

Initial First Release

---

## Suppliers

---

Update

---

When a purchase unit has been set as 'Can Order' a new icon has been added to the purchase unit row displayed in the suppliers tab for visual indication without needing to go into the Edit screen

---

When managing purchase units and entering a variant or product code the input will now stop when the maximum number of characters has been reached

---

## Display Details

---

Update

---

Any sales items that do not have a display record within iOrder Platform upon data hydration will now be displayed with "Start Adding Display Records", enabling a record to be created and then synced with iOrder Platform, this will prevent any confusion for these sales items. Any new sales items created will continue to automatically create a default display record

---

## Preparation

---

Update

---

Choice settings that were previously in the preparation tab have now been moved to the Other Conf. tab

---

## Other Configuration

---

Update

---

Choice settings that were previously in the Preparation tab has now been moved into the Other Conf. tab

---

When any new sales items are created the setting for 'Order Panel Display' will automatically be selected for alternative portions, the standard portion will remain unchecked

This feature will future use in the Zonal Connect App for Aztec+
